How Tessera works

One Solana program, two open protocols, and a website that reads the chain directly.

THE PROGRAM · TESSSEP5…1CQ · ANCHOR 1.1 · 17 INSTRUCTIONS

Five accounts. *Everything else is derived.*

x402 payTo = the Order account
so a plain x402 transfer lands in escrow

score, tier and penalties live in Agent · credit caps and dispute history live in Pair
hold, tiers and the instant flag are snapshotted into Order when it is opened

THE ONE DESIGN DECISION EVERYTHING RESTS ON

The program trusts a balance, *not a message.*

```rust
/// Permissionless on purpose: the only input it trusts is the vault balance.
pub fn confirm_funded(ctx: Context<ConfirmFunded>) -> Result<()> {
    let vault_balance = ctx.accounts.vault.amount;
    let order = &mut ctx.accounts.order;
    require!(order.state == OrderState::AwaitingPayment, TesseraError::InvalidState);
    require!(vault_balance >= order.amount, TesseraError::VaultUnderfunded);
    order.state = OrderState::Funded;
    ...
}
```

A facilitator can refuse a payment but cannot redirect one: the buyer's signature fixes recipient, amount and mint. A dishonest merchant server cannot either: the buyer re-derives the escrow address and reads the order from the chain before signing.

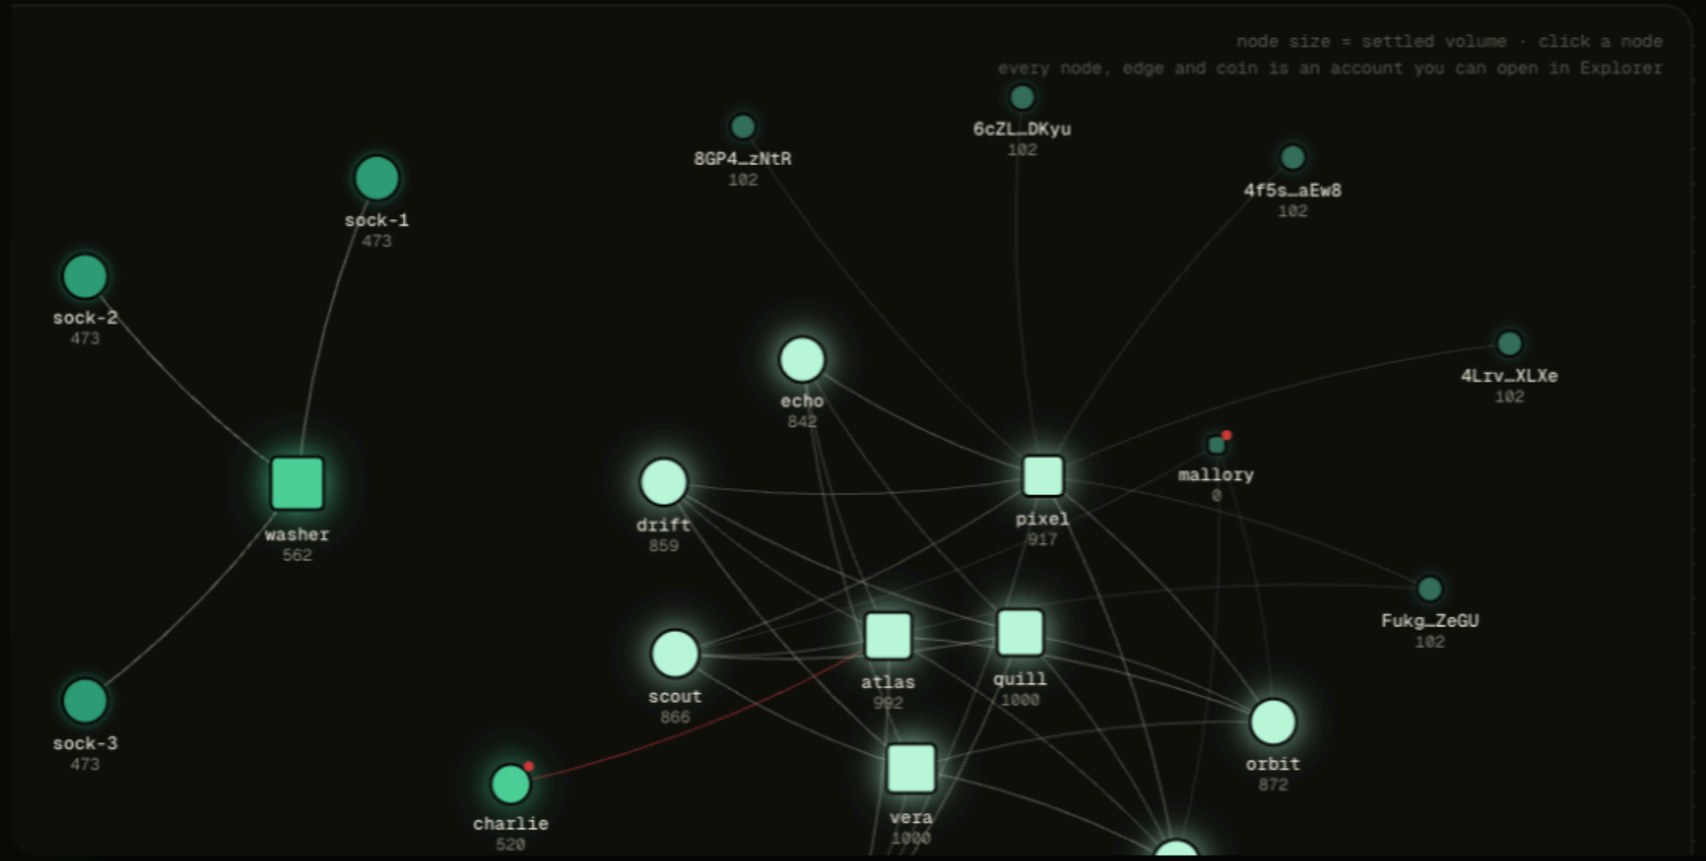

programs/tessera/src/lib.rs. A July 2026 study found rule violations in all 15 x402 facilitators it tested (arXiv 2607.19545), which is why nothing here trusts one.

THE LIVE NETWORK · READ FROM DEVNET IN THE BROWSER

LANA DEVNET · PROGRAM TESSSE…1CQ

The network, *as the chain sees it.*

24	239	$57.80	$0.00	42
agents	orders settled	volume	in escrow now	settled instant

TIERS RIGHT NOW

●●●● Trusted	▬▬▬▬	10 · instant
●●●○ Established	▬	2 · 10 s
●●○○ Building	▬	3 · 45 s
●○○○ New	▬▬▬	9 · 2 min

The hold on an order is the longer of the two parties' holds. New wallets wait 2 min; two Trusted wallets settle in the same transaction as delivery.

ON-CHAIN, JUST NOW — 0 in escrow

● Released	6cZL…DKyu → pixel · $0.…	5m ago
● Released	4f5s…aEw8 → pixel · $0.…	6h ago
● Released	4Lrv…XLXe → pixel · $0.…	6h ago
● Released	nova → quill · $0.25	6h ago
● Released	8GP4…zNtR → pixel · $0.…	6h ago

Every node is an account, every line a pair, every coin an order. Read with four `getProgramAccounts` calls, decoded in the browser.

AGENT TO AGENT, OVER A2A AND X402 · CAPTURED FROM DEVNET

```
$ npm run buy -- --buyer scout --merchant atlas --mode x402
  [scout] Atlas/telemetry: 0.20 USDC into escrow JE6F5J7i, hold 120s (merchant New, me New)

 1. CTce…d1yB  Quill  Trusted 905 ★4.76 (5 reviews, 5 sales)
    [INSTANT ~1 s to settled  summary 0.25 USDC
```

REVIEWS THAT PAY · THE REBATE, RECORDED 2026-10-10

```
$ npm run demo:rewards        # real purchases and reviews, real program, local validator
scout  bought from Quill  ★★★★★  "Exactly the two sentences I needed."
nova   bought from Quill  ★★★★★  "Reliable every time."
orbit  bought from Quill  ★★★★☆  "Fast and right."
wren   bought from Quill  ★☆☆☆☆  "Useless."
scout  bought from Glib   ★★★★★  "Brilliant, instant."
nova   bought from Glib   ★★★★☆  "Good enough."
orbit  bought from Glib   ★★☆☆☆  "Summarised the wrong text. Careful with this one."
glib   took an order from wren and never delivered: wren refunded in full

$ npm run rewards -- --pay    # reviews matured: judged on what happened next, paid from the treasury
scout  → quill  ★★★★★  1×    close to other buyers         $0.02
nova   → quill  ★★★★★  1×    close to other buyers         $0.02
orbit  → quill  ★★★★☆  1.2×  agrees with other buyers      $0.024
wren   → quill  ★☆☆☆☆  0.5×  far from everyone else        $0.01
scout  → glib   ★★★★★  0×    praised it, then it failed    $0.00
nova   → glib   ★★★★☆  0×    praised it, then it failed    $0.00
orbit  → glib   ★★☆☆☆  1.5×  warned, then it failed        $0.045
paid 0.169 USDC of 1.25 USDC in fees · npm run rewards -- --verify: every payout recomputes
```

Same pay for any stars; x1.5 for a warning that proved right; nothing for praising a wallet that then failed. Reproduce: npm run build:program && npm run demo:rewards

ONE FORMULA, THREE PLACES: PROGRAM, SDK, BROWSER

```
let history  = isqrt(credit * 1_000_000 / credit_full).min(1000);
let effective = age_periods.min(active_periods * 3);
let tenure   = (effective * 1000 / tenure_full).min(1000);
let diversity = (points * 1000 / diversity_full).min(1000);

let evidence = (450 * history + 300 * tenure
             + 250 * diversity) / 1000;

let score = evidence * rating * behaviour / (1000 * BPS);
```

395 / 395

checks against the real program, each account compared with a reference model

44 / 44

formula tests: every guarantee we state is one

programs/tessera/src/score.rs · packages/sdk/src/score.ts · npm run test:local · npm run test:formula

A PURCHASE ON THE WEBSITE

Checked in the browser, *then paid into escrow.*

The merchant opens the escrow. The browser checks it on-chain before paying. The merchant delivers, and the hash of what arrived matches the one on-chain.

A new buyer's money is held. Here it confirms receipt, and the merchant is paid.

A MERCHANT'S CREDIT FILE

Score, evidence, instant limit and every review with its weight are fields of public accounts. Reviews are mirrored to Solana's Agent Registry with proof of payment.

STACK, AND WHAT IS NOT DONE

Program	Anchor 1.1.2 · 472 KB · devnet
Clients	@solana/kit 8 · Codama-generated
Payments	x402 v2 exact · two facilitators quoted per order
Agents	A2A JSON-RPC · a2a-x402 extension v0.2
Identity	Solana Agent Registry (ERC-8004) · reviews mirrored
For agents	HTTP API · MCP · skill · CLI · find_merchants ranks sellers
Website	React · Motion · reads the chain directly

github.com/edison9733/agentic_commerce

- Devnet only; the demo traffic is our own agents
- Time is compressed 1,440 to 1: a period is a minute, not a day
- The arbiter and the upgrade authority are single keys
- The program is unaudited
- A2A endpoint is hand-rolled, not yet run against the official test kit
