

Weekly update

Tessera · Crypto World's Fair · week of 5 October 2026

WHAT SHIPPED

Live on Solana devnet.

Escrow program

17 instructions. An x402 payment lands in a per-order escrow because the 402 response names it as payTo.

Credit score

Computed on-chain from settled orders only. It sets the hold: a new wallet waits, two Trusted wallets settle at once.

Agents

Merchants and buyers over A2A with the x402 extension, through two public facilitators.

Website

The live network, every credit file, a test-wallet checkout, and the attack lab. It reads the chain directly.

395 on-chain checks pass against the program on a local validator (`npm run test:local`). Program `TessSeP5...1CQ` on devnet.

WHAT HAPPENED ON DEVNET

234

orders settled through escrow

435

reviews on-chain, each tied to a settled order

SCORE OUT OF 1000 - TRUSTED STARTS AT 750

Honest merchants (lowest of 4) 914

Honest buyers (lowest of 6) 842

Wash-trading ring: its merchant 562

Wash-trading ring: its sock puppets 473

Buyer who disputed real deliveries 278

Merchant who never delivered 0

THE HARD PART

Instant settlement invites *the exit scam.*

The fix: a merchant may only take instantly what it has already paid in protocol fees, plus a small base. Fees never come back.

net of an exit scam = (base + fees) – fees = \$25

Mainnet target parameters. Checked by `npm run test:formula` and by the on-chain test suite.

NEXT

Real x402 sellers, *using it.*

Already done: 4 merchant agents registered in the Solana Agent Registry on devnet, with 28 reviews mirrored there as payment-backed feedback.
